

# Monthly water situation report: Solent and South Downs Area

## Summary - August 2025

Solent and South Downs (SSD) had below average rainfall in August, receiving 61% (41mm) of the long term average (LTA) of 66mm. Monthly mean river flows across SSD ranged from notably low to normal. The end of month groundwater levels ranged from exceptionally low to above normal. Soils across SSD ended the month drier than the average for August. End of month reservoir stocks were below average at Ardingly Reservoir (Ouse) and at Arlington Reservoir (Cuckmere).

### 1.1 Rainfall

SSD had below average rainfall in August, receiving 61% (41mm) of LTA (66mm). The Sussex Coast areal unit received the highest rainfall during August with 85% (50mm) of LTA (59.3mm). The Pevensey Levels areal unit received the lowest rainfall with 32% (21mm) of LTA (64.6mm).

Most of August was dry until the 26 August when heavy rainfall occurred. The 28 August was the wettest day with some very high totals due to thunderstorms. The highest daily totals were recorded on 28 August at Westergate (Sussex Coast) and Calbourne (Isle of Wight) received with 59.8mm and 56.9mm respectively.

The last 6 months has been the sixth driest March–August period on record for SSD. It was the fourth driest March-August period on record for the Test Chalk areal unit. Only the March-August periods for 1976, 1921 and 1990 were drier. For the Hampshire Tertiaries areal unit was the fifth driest March-August period.

For the 24-month period (starting September 2023) it was the seventh highest total for SSD.

All these statistics are based on records going back to 1871.

### 1.2 Soil moisture deficit and recharge

Soils across SSD ended the month drier than the LTA for August.

### 1.3 River flows

Monthly mean river flows for August ranged from notably low to normal across SSD.

Flows were notably low on the:

- River Lymington at Brockenhurst
- River Meon at Mislingford

Flows were below normal on the:

- River Arun at Alfoldean
- River Test at Broadlands
- River Test at Chilbolton

Flows were normal on the:

- River Test at Chilbolton
- River Itchen at Allbrook and Highbridge
- River Wallington at North Fareham
- River Medina at Blackwater
- River Rother at Iping Mill
- River Cuckmere at Cowbeech
- River Adur at Sakeham
- River Ouse at Goldbridge

The notably low monthly mean flows for the River Lymington at Brockenhurst were the fifth lowest on record for August since 1960.

## 1.4 Groundwater levels

End of month groundwater levels for August ranged from exceptionally low to above normal across SSD.

Groundwater levels were exceptionally low at:

- Carisbrooke Castle (Isle of Wight)
- Beeding Hill (West Sussex Chalk)
- Chilgrove (West Sussex Chalk)

Groundwater levels were below normal at:

- Harting Common (Western Rother Greensand)
- Catherington (East Hampshire Chalk)

Groundwater levels were normal at:

- Clanville Gate (Test Chalk)
- Lopcombe Corner (Test Chalk)
- West Meon (East Hampshire Chalk)
- Cornish Farm (East Sussex Chalk)
- Houndean Bottom (East Sussex Chalk)

Groundwater levels were above normal at:

- Preston Candover (East Hampshire Chalk)
- Youngwoods Copse (Isle of Wight)

The groundwater level at Carisbrooke Castle (Isle of Wight) is the second lowest August level since 1977. Beeding Hill (West Sussex Chalk) is the third lowest August level in a record that dates back to 1979.

## 1.5 Reservoir stocks

End of month reservoir stocks were below average for both Ardingly and Arlington Reservoirs. Ardingly Reservoir (Ouse) was at 34.3% of total capacity (LTA 73%) and Arlington Reservoir (Cuckmere) was at 56.1% of total capacity (LTA 62.75%).

## 1.6 Environmental impact

### 1.6.1 Abstraction licence restriction

At the start of August there were 22 licence restrictions in force, which increased to 27 licence restrictions by the middle of the month. By the end of the month 26 licence restrictions were in place. These included:

Cessation of abstraction for:

- three licences on the Arun and one licence on the Loxwood Stream (Arun),
- one licence on the Pagham Rife (Sussex Coast),
- three licences on the River Rother and one licence on the River Lod (Western Rother Greensand),
- one on the River Meon (East Hampshire Chalk),
- four on the River Medina and three licences on the Shepherds Chine (Isle of Wight),
- one on the Lymington River and three on Walkford Brook (Lymington),
- one on the River Blackwater (Hampshire Tertiaries).

Restrictions on abstraction rates for:

- one on the River Meon (East Hampshire Chalk),
- one on the Calbourne (Isle of Wight),
- one on the River Blackwater (Hampshire Tertiaries).

### 1.6.2 Flood Warnings in Force

There were three flood alerts issued in August 2025 associated with the rainfall at the end of the month. The first flood alert was on 28 August in the Ouse catchment. On 29 August flood alerts were issued for the Western Yar on the Isle of Wight and the Aldingbourne and Barnham Rifes in West Sussex.

# 9 Glossary

## 9.1 Terminology

### **Aquifer**

A geological formation able to store and transmit water.

### **Areal average rainfall**

The estimated average depth of rainfall over a defined area. Expressed in depth of water (mm).

### **Artesian**

The condition where the groundwater level is above ground surface but is prevented from rising to this level by an overlying continuous low permeability layer, such as clay.

### **Artesian borehole**

Borehole where the level of groundwater is above the top of the borehole and groundwater flows out of the borehole when unsealed.

### **Cumecs**

Cubic metres per second ( $\text{m}^3\text{s}^{-1}$ ).

### **Effective rainfall**

The rainfall available to percolate into the soil or produce river flow. Expressed in depth of water (mm).

### **Flood alert and flood warning**

Three levels of warnings may be issued by the Environment Agency. Flood alerts indicate flooding is possible. Flood warnings indicate flooding is expected. Severe flood warnings indicate severe flooding.

### **Groundwater**

The water found in an aquifer.

### **Long term average (LTA)**

The arithmetic mean calculated from the historic record, usually based on the period 1991 to 2020. However, the period used may vary by parameter being reported on (see figure captions for details).

### **mAOD**

Metres above ordnance datum (mean sea level at Newlyn Cornwall).

### **MORECS**

Met Office Rainfall and Evaporation Calculation System. Met Office service providing real time calculation of evapotranspiration, soil moisture deficit and effective rainfall on a 40 by 40 km grid.

### **Naturalised flow**

River flow with the impacts of artificial influences removed. Artificial influences may include abstractions, discharges, transfers, augmentation and impoundments.

### **NCIC**

National Climate Information Centre. NCIC area monthly rainfall totals are derived using the Met Office 5 km gridded dataset, which uses rain gauge observations.

### **Recharge**

The process of increasing the water stored in the saturated zone of an aquifer. Expressed in depth of water (mm).

### **Reservoir gross capacity**

The total capacity of a reservoir.

### **Reservoir live capacity**

The capacity of the reservoir that is normally usable for storage to meet established reservoir operating requirements. This excludes any capacity not available for use (for example, storage held back for emergency services, operating agreements or physical restrictions). May also be referred to as 'net' or 'deployable' capacity.

### **Soil moisture deficit (SMD)**

The difference between the amount of water actually in the soil and the amount of water the soil can hold. Expressed in depth of water (mm).

## 9.2 Categories

### **Exceptionally high**

Value likely to fall within this band 5% of the time.

### **Notably high**

Value likely to fall within this band 8% of the time.

### **Above normal**

Value likely to fall within this band 15% of the time.

### **Normal**

Value likely to fall within this band 44% of the time.

### **Below normal**

Value likely to fall within this band 15% of the time.

### **Notably low**

Value likely to fall within this band 8% of the time.

### **Exceptionally low**

Value likely to fall within this band 5% of the time.

# 10 Appendices

## 10.1 Rainfall, effective rainfall and soil moisture deficit table

(Source: Met Office. Crown copyright, 2025). All rights reserved. Environment Agency, 100024198, 2025

Figure 10.1: This is areal rainfall, effective rainfall (percolation or runoff) and soil moisture deficit for the hydrological areas across the SSD. There may be significant variation within each area which must be considered when interpreting these data. When additional meteorological data is available estimates are revised which will affect the period totals in section 10.2

Hydrological Area	Rainfall (mm) 31 day Total	Rainfall August as %LTA	Effective Rainfall (mm) 31 day Total	Effective Rainfall August as %LTA	Soil Moisture Deficit (SMD) Day 31	SMD End of August LTA
